(a)
$\chi_*(\gamma r_0)$
$[2r_0\sqrt{\gamma-1}]^{-1}$
stable
oscillatory growth
zero-frequency growth
$k_x a$
matching fraction $\gamma = \gamma_\pm$
(b)
oscillatory
stable
zero-freq.
negative rows γ_-
positive rows γ_+
(c)
$\gamma = 0$ (ordinary $-C$)
$\gamma = 0.5$
$\gamma = 1$ (matched)
$\sigma_{\max} a / v_p$
$k_x a$
